ACKNOWLEDGEMENT

Initially we thank the Almighty for being with us through every walk of our life and showering his blessings through the endeavor to put forth this report. Our sincere thanks to our Chairman **Mr. S.MEGANATHAN, B.E, F.I.E.**, our Vice Chairman **Mr. ABHAY SHANKAR MEGANATHAN, B.E., M.S.**, and our respected Chairperson **Dr. (Mrs.) THANGAM MEGANATHAN, Ph.D.**, for providing us with the requisite infrastructure and sincere endeavoring in educating us in their premier institution.

Our sincere thanks to **Dr. S.N. MURUGESAN, M.E., Ph.D.**, our beloved Principal for his kind support and facilities provided to complete our work in time. We express our sincere thanks to **Mrs. S. RENUKADEVI** Professor and Head of the Department of Artificial Intelligence and Machine Learning for his guidance and encouragement throughout the project work. We convey our sincere and deepest gratitude to our internal guide, **Mr.G. THIYAGARAJAN**, Department of Artificial Intelligence and Machine Learning for his useful tips during our review to build our project.

LATHIKA N -241801135

DEPARTMENT VISION

To produce highly competent and ethical professionals through excellence in teaching innovation, and research in emerging technologies.

DEPARTMENT MISSION

To provide quality technical education in the field of computing technologies.

To encourage innovation and project-based learning.

To develop problem-solving skills and ethical values among Rooms.

To prepare Rooms for industry and higher education.

PROGRAMME EDUCATIONAL OBJECTIVES(PEO'S)

PEO 1: To provide strong foundations in computer science and engineering principles.

PEO 2: To prepare Rooms with fundamental knowledge in programming languages, and tools and enable them to develop applications.

PEO 3: To encourage the research abilities and innovative project development in the field of AI, ML, DL, networking, security, web development, Data Science and also emerging technologies for the cause of social benefit.

PEO 4: To develop professionally ethical individuals enhanced with analytical skills, communication skills and organizing ability to meet industry.

PROGRAMME OUTCOMES (POs)

PO 1: Engineering knowledge: Apply the knowledge of Mathematics, Science, Engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO 3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO 4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO 6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO 7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO 8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO 9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO 10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO 11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

A graduate of the Artificial Intelligence and Machine Learning Program will demonstrate

PSO 1: Foundation Skills: Ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, web design, AI, machine learning, deep learning, data science, and networking

PSO 2: Problem-Solving Skills: Ability to apply mathematical methodologies to solve computational task, model real world problem using appropriate AI and ML algorithms. To understand the standard practices and strategies in project development, using open- ended programming environments to deliver a quality product.

PSO 3: Successful Progression: Ability to apply knowledge in various domains to identify research gaps and to provide solution to new ideas, inculcate passion towards higher studies, creating innovative career paths to be an entrepreneur and evolve as an ethically social responsible AI and DS professional.

COURSE OBJECTIVE

- To provide foundational knowledge and practical skills in creating and structuring web pages using HTML, enabling Rooms to build accessible and well-organized websites.
- To understand and practice Embedded Dynamic Scripting on Client-side Internet Programming.
- To implement Server Side Scripting.
- To facilitate Rooms to understand android Application Design
- To help Rooms to gain a basic understanding of Android application development

COURSE OUTCOME

On completion of course Rooms will be able to,

- CO 2: Upon completing the course, Rooms will be able to design and develop basic web pages with proper structure and semantic elements, ensuring accessibility and functionality.
- CO 3: Design and implement dynamic web page with validation using javascript objects and by applying different event handling mechanism.
- CO 4: Design and implement simple webpage to learn JSP and Servlet.
- CO 5: Design and implement simple Application Design.
- CO 6: Identify various concepts of mobile programming that make it unique from programming for other

SUSTAINABLE DEVELOPMENT GOALS

SDG	GOAL	JUSTIFICATION
 SDG-4	Quality Education	Education drives progress on other SDGs, breaks poverty cycles, and promotes peace and inequality reduction.
 SDG-8	Decent Work and Economic Growth	Necessary for social stability, shared prosperity, and combating poverty.
 SDG-9	Industry, Innovation, and Infrastructure	Infrastructure is vital for economic growth and stability. It acts as a poverty reduction tool through job creation and provides technological solutions to environmental challenges.
 SDG-17	Partnerships for the Goals	Given the interconnected nature of the SDGs, success requires collaborative action, global resource sharing, and bridging the immense financing gap faced by developing nations.

ABSTRACT

The Online Hotel Room Booking System is a web-based application developed to simplify hotel reservation and room management processes. The system allows users to search available rooms, check room details, and make bookings through an easy-to-use interface. It replaces the traditional manual booking process with a digital platform that improves efficiency, reduces errors, and saves time for both customers and hotel management. The application provides different functionalities such as room availability checking, customer registration, booking confirmation, room selection, and payment details management. Users can browse various room categories including Deluxe, Suite, and Standard rooms along with pricing information and amenities.

JavaScript is used to implement form validation, event handling, popup messages, and dynamic webpage interactions. HTML and CSS are used to design attractive and responsive web pages. The project improves user experience by offering secure booking processes and instant booking confirmation.

The system reduces manual paperwork and provides an efficient solution for hotel room reservations. It is suitable for hotels, resorts, and guest houses that require an online booking platform.

CHAPTER 1

INTRODUCTION

1.1 General

Hotel booking is an important process in the hospitality industry. Traditionally, hotel reservations were managed manually through phone calls and physical registers, which often led to booking errors, delays, and inconvenience for customers.

The Online Hotel Room Booking System is developed to automate the reservation process and provide customers with a simple and efficient way to book rooms online. The system allows users to check room availability, select room types, and confirm reservations through a web interface.

The application improves booking efficiency and reduces manual work for hotel staff. Customers can access hotel information anytime and reserve rooms without visiting the hotel physically.

1.2 Need for Online Hotel Room Booking

Traditional hotel booking systems face several challenges such as manual errors, double bookings, poor record management, and slow customer service.

An online booking system helps overcome these problems by:

Providing quick room reservation.

Reducing paperwork.

Improving booking accuracy.

Offering 24/7 booking access.

Enhancing customer satisfaction.

The system also helps hotel management maintain customer records and booking information digitally.

The system improves transparency, reduces paperwork, and minimizes the chances of human error. Additionally, it allows institutions to easily generate attendance reports and identify Rooms with low attendance levels, enabling timely intervention and better academic monitoring.

1.3 Scope of the System

The The Online Hotel Room Booking System provides facilities for:

- User registration and login.
- Viewing available rooms.
- Booking hotel rooms online.
- Checking room prices and room categories.
- Displaying booking confirmation.
- Managing customer booking information.

The project can be used in hotels, lodges, and resorts.

1.4 Organization of the Report

This report is organized into several chapters that describe the development and implementation of the Room Attendance Management System.

Chapter 1

Introduction to the Online Hotel Room Booking System.

Chapter 2

Literature survey and existing hotel booking systems.

Chapter 3

Problem statement and project objectives.

Chapter 4

System design and architecture.

Chapter 5

System implementation and module description.

Chapter 6

Results and discussion.

Chapter 7

Conclusion and future enhancements.

System architecture diagram:

CHAPTER 2

LITERATURE SURVEY

2.1 Introduction

The hospitality industry increasingly depends on digital platforms to manage reservations and improve customer experience. Online hotel booking systems provide efficient booking and management facilities.

tracking. These systems aim to reduce manual work, improve data accuracy, and provide real-time access to attendance information for teachers and administrators.

2.2 Existing Hotel Room Booking

Existing hotel booking systems allow customers to:

- Search hotels online.
- Compare room prices.
- Reserve rooms digitally.
- Receive booking confirmation instantly.

Popular systems include hotel websites and travel booking platforms.

2.3 Related Work

Many researchers have developed web-based booking systems using HTML, CSS, JavaScript, PHP, and MySQL.

Modern systems focus on:

- User-friendly interfaces.
- Secure payment systems.
- Mobile responsiveness.
- Fast booking confirmation.

2.4 Summary

The literature survey shows that online hotel booking systems improve efficiency, customer convenience, and booking management.

CHAPTER 3

PROBLEM FORMULATION AND OBJECTIVES

3.1 Problem Statement

Manual hotel reservation systems often lead to:

- Booking errors.
- Delayed reservation processing.
- Difficulty maintaining records.
- Poor customer communication.

Customers may also face inconvenience while checking room availability.

Therefore, an online booking system is required to simplify the reservation process.

The objectives of the project are:

- To develop a responsive hotel booking website
- To provide room booking facilities online.
- To implement JavaScript validation and interactions.
- To improve customer convenience and booking efficiency.
- To provide hotel bill calculation facilities

3.2 Objectives of the System

The main objective of the Online Hotel Room Booking is to develop a digital platform that simplifies the process of managing Room attendance. The system aims to provide an efficient and reliable way for faculty members to record attendance and for Rooms to monitor their attendance status.

The specific objectives of the system include:

- To develop a web-based hotel booking system.
- To provide easy room reservation.
- To validate booking details using JavaScript.
- To improve customer experience.
- To reduce manual work.
- To provide quick booking confirmation.

CHAPTER 4

SYSTEM DESIGN

4.1 Introduction

System design is an important phase in software development where the overall structure and components of the system are planned. It defines how different modules interact with each other and how data flows within the system. A well-designed system Stores booking details and customer information.

4.2 System Architecture

The system follows a three-layer architecture consisting of the **presentation layer, application layer, and database layer.**

Presentation Layer

Designed using HTML and CSS.

system. It includes web pages such as login pages, dashboards, and attendance viewing pages developed using HTML, CSS, and JavaScript.

•**ApplicationLayer:**

This layer handles the business logic of the system. It processes user requests, verifies login credentials, manages attendance records, and communicates with the database. The backend of the system is implemented using Node.js.

•**DatabaseLayer:**

This layer stores all the system data including Room details, faculty information, subjects, and attendance records. The database ensures secure storage and easy retrieval of information when required.

This architecture ensures smooth communication between users and the database while maintaining system efficiency and reliability.

4.3 System Requirements

System requirements define the hardware and software resources needed to run the application successfully.

4.3.1 Hardware Requirements

The Room Attendance Management System does not require high-end hardware and can run on standard computers.

- Processor: Intel Core i3 or higher
- RAM: Minimum 4 GB
- Storage: 500 GB Hard Disk or SSD
- Input Devices: Keyboard and Mouse
- Internet Connection

4.3.2 Software Requirements

The system is developed using commonly available software tools and technologies.

- Operating System: Windows 10 or later
- Frontend Technologies: HTML, CSS, JavaScript
- Backend Technology: Node.js
- Database: MySQL
- Development Environment: Visual Studio Code
- Web Browser: Google Chrome or any modern browser

CHAPTER 5

SYSTEM IMPLEMENTATION

5.1 System Methodology

The Online Hotel Room Booking is implemented using a web-based approach that allows users to access the system through a browser. The development process involves designing the user interface, implementing backend functionalities, and integrating the database for storing attendance records.

The frontend of the system is developed using HTML, CSS, and JavaScript, which provide a simple and interactive interface for both Rooms and faculty members. The backend is implemented using Node.js, which handles user authentication, attendance processing, and communication with the database. The system uses a MySQL database to store Room information, faculty details, subjects, and attendance records.

The system follows a modular approach where each functionality is developed as a separate module. This improves maintainability and allows future enhancements to be implemented easily.

5.2 Module Descriptions

The Online Hotel Room Booking consists of several modules that work together to provide efficient attendance management.

Index Module

The **Index Module** serves as the main entry point of the Room Attendance Management System. It provides a user-friendly interface that allows users to access the system and understand its key features before logging in.

The page displays the system title along with important features such as **Auto Email Alerts, Real-time Statistics, Secure Login, Chat Support, Batch Booking Marking, and No Duplicate Records**. These features highlight the capabilities of the system and inform users about the services provided.

Below the feature section, the page provides two login options: **Customer**. can select the Room option to view their Booking records and statistics, while faculty members can select the faculty option to log in and mark attendance or manage classes. This module acts as a gateway that directs users to their respective dashboards based on their role.

The design of the index module is visually appealing and simple, ensuring easy navigation and improving the overall user experience.

5.2.1 Customer Module

The Room Module allows Rooms to access their attendance information through a secure login system. After logging in, Rooms can view their subject-wise attendance records and overall attendance percentage.

This module improves transparency by enabling Rooms to monitor their attendance status regularly. It also helps Rooms stay aware of their academic participation and take necessary actions if their attendance is low.

5.2.2 Owner Module

The Owner Module allows teachers to manage Online Hotel Room Booking efficiently. members can log into the system and mark Booking for their respective Room .

The system stores the attendance records in the database and ensures that the data is organized properly for future reference. Faculty members can also review attendance records and verify Room participation.

5.2.2.1 – Automatic Subject Detection Using Time Slot

The system includes a special feature that simplifies the attendance marking process for faculty members who handle multiple classes. In many cases, a faculty member may teach the same class more than once a day or have multiple

5.2.2 Booking Form Module

This module allows users to enter booking details such as:

- Name
- Email
- Mobile Number
- Room Type
- Check-in Date
- Check-out Date

JavaScript validation ensures proper data entry.

5.2.3 Hotel Management Module

The Hotel Management Module is the core component of the system. It handles the process of recording, storing, and retrieving attendance information.

When faculty members mark attendance, the system updates the database instantly and maintains accurate records. The module also ensures that duplicate entries are avoided and that attendance data is stored securely.

5.2.4 Login and Authentication Module

This module provides secure access to the system by verifying user credentials during login. Both Rooms and faculty members must authenticate themselves before accessing the system.

Authentication ensures that only authorized users can access attendance records and system functionalities. This improves security and protects sensitive Room data.

5.2.5 Email Notification Module

The Email Notification Module allows the system to send automated notifications to users when necessary. It can be used to inform Booking is gone updates or important announcements.

This feature improves communication between Customer and ensures that users receive important information on time.

5.2.6 Communication (Chat) Module

The Communication Module enables interaction between Rooms and faculty through a simple messaging interface. This allows users to ask questions or clarify attendance-related issues directly within the system.

By providing a communication channel, the system improves collaboration and helps resolve issues quickly without relying on external platforms.

CHAPTER 6

RESULTS AND DISCUSSION

6.1 Results

The Room Booking Management System was successfully developed and tested using a web-based platform. The system allows faculty members to record Room attendance electronically while enabling Rooms to view their attendance information through a secure dashboard.

During testing, the system performed efficiently in handling user login, attendance recording, and data retrieval from the database. Faculty members were able to mark attendance for different subjects, and the system stored the data accurately in the database. Rooms could log in and view their subject-wise attendance details and overall attendance percentage.

The system also supports additional features such as email notifications and communication between faculty and Rooms. These features improve transparency and make it easier for users to stay informed about attendance updates.

Overall, the implemented system successfully achieved its objective of simplifying attendance management and reducing manual effort.

6.2 Performance Evaluation

The performance of the Room Attendance Management System was evaluated based on its usability, accuracy, and response time. The system provides a simple and user-friendly interface that allows both Rooms and faculty members to interact with the application easily.

The attendance data is stored in a centralized database, ensuring that records are maintained accurately and can be retrieved quickly when required. The use of Node.js for backend processing allows the system to handle user requests efficiently and update the database without delays.

Testing showed that the system performs well under normal usage conditions and provides reliable results for attendance recording and viewing. The modular design also ensures that additional features can be integrated in the future without affecting system performance.

6.3 Resource Utilization

The Room Attendance Management System is designed to run on standard computer systems without requiring high-end hardware resources. The application uses lightweight web technologies such as HTML, CSS, and JavaScript for the frontend, while Node.js manages backend operations.

The database stores attendance records efficiently, ensuring that system resources are used effectively. Memory and processing requirements remain minimal, allowing the system to operate smoothly even on basic hardware configurations.

Because the system is web-based, users can access it through a browser without installing additional software. This makes the system convenient and resource-efficient for educational institutions.

CHAPTER 7

CONCLUSION AND FUTURE WORK

7.1 Conclusion

Online Hotel Room Booking System successfully provides an efficient platform for room reservation and booking management.

The project simplifies hotel booking operations and improves customer satisfaction using modern web technologies.

The implementation of JavaScript validation and event handling enhances user interaction and reduces booking errors.

7.2 Future Enhancements

Future improvements may include:

- Online payment integration.
- Database connectivity.
- Admin dashboard.
- Mobile application support.
- Customer feedback system.

integration with management systems can further improve the effectiveness of the system.

These enhancements will make the Online Hotel System more advanced, user-friendly, and suitable for large-scale institutional use.
